Crated Glass Frames for Export to USA

Bike Racks Cut, Formed & Welded

# Kent Metal Products

---

Look around ... products that are made to last, are made of metal. And it's no wonder: Metal is strong, attractive, and malleable into most any form.

Based in Richmond, BC, **Kent Metal Products** is a full-service contract manufacturer of sheet metal products. From tables to tanks, window frames and storage lockers, **Kent** has the equipment and expertise to help you realize your production goals.

Serving clients in the Construction and Industrial manufacturing sectors, our clients appreciate the speed with which we can deliver vs buying offshore. They also value the ability to order in volumes that suit their order flow, our ability to make customizations on the fly, and the high level of service we deliver.

**Kent** maintains a robust inventory of metal gauges and finishes. Stainless, hot or cold rolled, P&O and more are kept on hand to speed delivery.

A Canadian Welding Bureau certified shop, our 15,000 square foot factory is well-equipped to expertly supply high-quality product for even the largest of jobs.

Once fabricated, **Kent** can help complete the job with a variety of finishing processes including paint, powder coat, chrome, anodizing, galvanizing and sandblasting.

Making it all happen is an expert team of welders, machine operators and metalworkers, many of whom have been working with **Kent** for over 25 years..

# Sheet Metal Forming

---

**Kent Metal Products'** specialty is Sheet Metal Forming, a process that transforms a thin sheet of steel by cutting, bending and rolling it into a 3 dimensional shape.

You'll see sheet metal products used everywhere in your life in objects like car bodies, appliances, aluminum siding and far more.

At **Kent**, we generally work with business and industry to custom-supply their manufacturing. In doing so, we've built hundreds of different items from sheet metal including:

- Tanks
- Brackets
- Washers
- Machine parts
- Safety Guards
- Tables and work benches
- Fascia for elevators and buildings

Sheet metal is available in a variety of thicknesses and finishes from rust-inhibiting to the highly cosmetic.

Base materials include many types of steel, aluminum and copper.

# Certified Welding

---

Your products are only as strong as the welds that hold them together. That's why **Kent Metal Products** maintains Canadian Welding Bureau Certification.

A rigorous program that tests the skill of our welders and shop process, CWB Certification is your guarantee of manufacturing quality.

The other guarantee comes from the skilled tradesmen that do the work. Among the products we have welded :

- Tanks
- Railings
- Screens
- Bike racks
- Staircases
- Bus Shelters
- Retail Displays
- Window Frames
- Mechanical Parts

# Laser Cutting

---

One of the most versatile tools in the Kent Metal Products factory is our amazing 2kw CO2 laser.

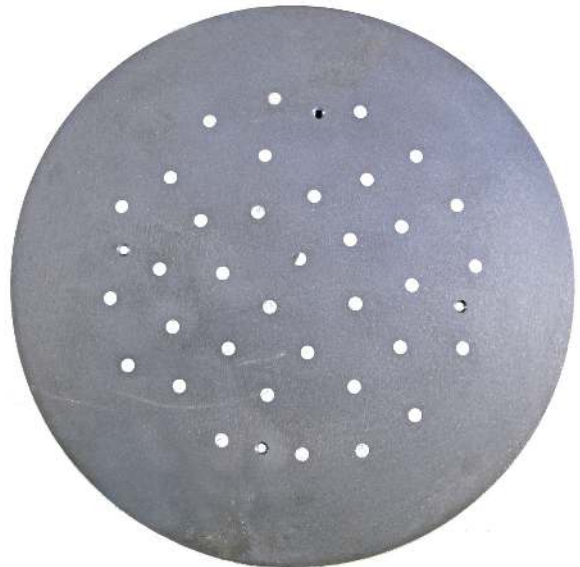

Able to cut 4' x 8' sheets up to 1/2" thick, our laser cutter can cut complex shapes with exacting precision.

Faster than traditional machining, and more accurate than water-jet cutting, Kent's laser can cut :

- Aluminum
- Mild Steel
- Stainless
- Plastics
- Wood

The laser employs a digital controller that requires the part first be drawn as a .DXF file using software like AutoCad or MasterCam. We then take those files and layer-on information such as the cutting speed and tool path. Once that .DXF file is created, parts can be reproduced in any quantity. And because these digital files don't change, you can be sure that re-orders will be identical.

If creating the .DXF file is an issue for you, Kent is glad to assist via our drawing and setup services.

# Construction Industry

---

**Kent Metal Products** is fortunate to count the construction industry as the largest industry we supply.

Best known through our branded subsidiary **Advantage Bike Racks**, we've been supplying bike racks, storage lockers, and partition fencing for decades.

We also supply the industry through the many sub-trades for whom we custom-make metal products like stainless fascia and site furniture.

Of particular note is our work supplying glaziers with the metal frames and brackets that hold their glass securely in place.

New to our service is the production of pipe and equipment guards for parking areas (delivered through our subsidiary Advantage Bike Racks).

Using our laser cutter, we've cut complex art shapes into metal sheets to make privacy screens and decorative exterior features.

We've even worked with a civil engineering firm to produce the jet exhaust baffles used at YVR.

Recent projects include producing garbage bin enclosures, food carts and bike rack signage for the streets of Vancouver.
